/ Zero energy reactor RB. D. Popović, S. Takač, H.
Marković, N. Ristić, Z. Zdravković, and Lj. Radanović
(Inst. Nuclear Sci. "Boris Kidrič," Belgrade, Yugoslavia).
Bull. Inst. Nuclear Sci. (Belgrade) 9, No 108, 5-13(1960). —
The Zero energy reactor with natural U metal fuel and a
heavy water moderator, is mounted at least 4 m. from any
reflecting surface to facilitate crit. expts. The reactor is
controlled by adjusting the heavy-water level. H. H. II.

 ✓ Measurement of M and k_{∞} for a heavy-water-natural
 uranium assembly. D. Popovic, N. Raišić, H. Marković,
 S. Takac, Z. Zdravković, and B. Lolić (Inst. Nuclear Sci.
 "Boris Kidrič", Belgrade, Yugoslavia). *Bull. Inst.*
Nuclear Sci. "Boris Kidrič" (Belgrade) 9, No. 180, 15-19
 (1959).—The migration length M and the infinite multi-
 plication factor k_{∞} of the heavy-water natural-U bare as-
 sembly can be accurately detd. by measuring the reactivity
 of the reactor as a function of the heavy-water level. The
 observations lead to a value k_{∞} of 1.210 ± 0.006 .

Dentition. Contribution on the influence of goitre on
dentition ÖST. Z. STOMATOL. 1955, 52/8 (407-411) Graphs 1 Illus. 2
Report on dentition in children from a region with endemic goitre in Serbia.
Dentition in these children shows unmistakable retardation parallel with retarda-
tion in ossification. No data on thyroid function are given (similar conditions re-
garding dentition and ossification have repeatedly been described for other goitre
regions; Abstractor's note).

Material transfer by adsorption of solutions at transition flow rates. S. Koncar-Djurđević and G. D. Popović (Univ. Belgrade, Yugoslavia). *Chem. chim.* 77, 121-6 (1987), cl. C.A. 51, 3104c. Mass transfer on the inside of a cylindrical pipe is studied by means of adsorption of dye from a soln. flowing through the pipe at Reynolds nos. varying from 300 to 10,000. A parallelism between mass transfer by adsorption, impulse transfer, and heat transfer was found for all flow rates. Exptl. and calcd. values of heat transfer coeffs. agree by adjusting an additive const. (the time of adsorption).

ABSTRACT: Study of adenosine, adenosine monophosphate and adenosine triphosphate on the effect of angiotensin and dipyridamol on blood vessels. Dipyridamol inhibited the vasoconstrictive effect of epinephrine or norepinephrine already at very low (10^{-7}) concentrations but did not effect the angiotensin response either alone or with adenosine. TITLE: Some problems of group psychotherapy in the treatment of hospitalized
psychiatric patients

SOURCE: Medicinski glasnik, no. 12, 1964, 422-426

TOPIC TAGS: psychology, applied psychology, psychoneurotic disorder

ABSTRACT: Data from 18 months' study with group psychotherapy in this
psychiatric hospital involving 12 groups of patients so treated, including
207 psychotics, primarily schizophrenic patients (145 of latter), 140
neurotic patients (105 alcoholics and 33 psychopathic personalities).
The structure of the group is discussed as is the method of group work,
some special aspects of the authors' group, group psychotherapy for psychotics,
indications and contraindications, and cooperation with other medical
personnel. The meetings were held twice weekly and the patients were kept
in any of the treated groups on an average of 67 days. Initially the intent
was mainly to give some support and social stimulus to the patients; later
more ambitious aims were included. 16 Western references.

"Certain Aspects of Neurosis among Radiotelegraphers and Flight Control Personnel."

Belgrade, Medicinski Glasnik, Vol 17, No 5, May 1963, pp 193-198.

Abstract: [Authors' Serbocroatian summary modified] Examinations of 95 radiotelegraphers and flight control personnel of the Civil Aviation Administration in 1960 and 1961 disclosed 31 cases of neurosis, mainly of a light nature, while 18 cases were uncovered among 32 radiotelegraphers in similar examinations in another institution (unnamed). There were somewhat more compulsive neuroses among the radiotelegraphers than in the rest of the population. The Minnesota Personality Inventory test, adapted to Serbocroatian,

1/1/ showed more introverted personalities among those tested.
